How do I install a fire alarm battery cabinet?

The BC-1(R) provides an internal terminal assembly for wiring the batteries to the fire alarm control panel power supply terminals. Install the battery cabinet in accordance with CAN/ULC-S524 Installation of Fire Alarm Systems. Install the battery cabinet in the same room as the fire alarm control panel.

How do you reinstall a battery cabinet?

Reinstall the left side panel on the left-most battery cabinet after interconnection. Push the third battery cabinet into position, align with the seismic anchoring (if any), level the battery cabinet, and interconnect with the other battery cabinets as described in step 2, step 3, and step 5.

How do you level a battery cabinet?

Remove the side panels that are adjacent to the other battery cabinets. Push the right-most battery cabinet into position. For seismic anchoring, ensure that the rear seismic bracket connects to the rear anchors. Lower the levelling feet until they connect with the floor - use a bubble-level to ensure that the cabinet is level.

How do you mount a BC-1(R) cabinet?

Refer to Figure 4 for BC-1(R) cabinet dimensions. Attach the wall box to the wall using the mounting holes on the back of the wall box. See Figure 1. Use fasteners that can support the full weight of the cabinet, including the batteries.

Connect the power system's battery cable terminated in an Anderson connector to the first battery cabinet's battery cable terminated in a mating Anderson connector.

NOTE: This procedure describes how to position and interconnect several battery cabinets. If your system only has one battery cabinet, you only need to follow step 2 and step 3.

The Eaton®; Samsung Gen 3 Battery Cabinet provides power for energy storage and emergency backup power for the Eaton Uninterruptible Power Supply (UPS) systems to enhance the usability and ...
