Global solar capacity has surpassed 2.2 TW, led by record 2024 installations. Explore the growth, challenges, and future of solar in the 2025 IEA-PVPS outlook.

The annual growth rate of the photovoltaic market is expected to be around 20% for 2025. However, a more rapid deployment of renewable energy is needed to stay on track for no more than 1.5 °C ...

On the one hand, unprecedented volumes of solar PV capacity were deployed, led by China with an estimated 357.3 GW, followed by the European Union (62.6 GW), the United States ...

Photovoltaic (PV) solar accounted for 58% of all new electricity-generating capacity additions through the third quarter of 2025, remaining the dominant form of new electricity-generating ...

In the EU, utility-scale PV made up 42% of new additions (up 6% from 2023), commercial and industrial PV made up 39% of new additions (up 3% from 2023), and residential PV ...

Nowadays, whether in photovoltaic industry or energy storage industry, the competition among enterprises is particularly fierce, the giant effect is more obvious, and the living space of small and ...

The IEA PVPS Trends in Photovoltaic Applications 2025 report provides comprehensive data and analysis on global PV deployment, technology, and market evolution from 1992 to 2024.

This research article examined the performance of 7 & #215; 7 solar PV array configurations: SP, BL, HC and TT PV configurations under various partial shading patterns ...

As the PV market grows constantly, reporting of PV installations is becoming more complex. IEA PVPS has decided to count all PV installations, both grid-connected and off-grid, when numbers are ...

2025 Photovoltaic Seven Consecutive Boards

Each quarter, NREL conducts a presentation of technical trends within the solar industry.
