You've probably heard the golden rule of solar installation: "Always face panels south for maximum efficiency." But what if your roof resembles a compass needle stubbornly pointing west?

West-facing solar arrays are mounted on the side of the roof that receives the sun in the afternoon and evening. In most U.S. climates, these systems generate less annual energy than a ...

However, since the sun travels east in the northern hemisphere and west in the southern hemisphere (due to Earth's rotation), this means that if you install your solar panels facing north they won't be ...

I have all of my panels facing west on a low slope roof. It's not as efficient vs south facing, but my system still works well, generation more than enough electricity

East- and west-facing roofs can still produce substantial energy. West-facing arrays often yield higher afternoon production, which can match peak utility rates in many U.S. regions.

So, in essence, the answer is that you should try to put your panels on the "sunnier" side of the roof in terms of weather: if you have cloudy mornings more often, the west-facing roof, and if ...

Are they facing the right direction? Most solar panels are oriented so they face south, but they'd be more useful to nation's utilities if more of them faced west and helped with peak power ...

In such cases, homeowners may wonder if solar panels can be installed on a west-facing roof. This article will delve into the considerations and benefits of installing solar panels on a west-facing roof.

East-facing panels in full sun will consistently outperform west-facing panels in partial shade--sometimes by 20% or more. East and west produce nearly identical total energy.

Can photovoltaic panels be installed on the west side

Yes, west-facing solar panels are a good option for many homeowners.
