When particles from the sun strike Earth's magnetic field, we can have beautiful auroras. But rare, strong solar storms can cause electrical grids to fail, and more.

Solar storms typically begin when these twisted magnetic fields on the Sun get contorted and stretched so much that they snap and reconnect (in a process called magnetic reconnection), ...

However, portable solar generators provide a cleaner, safer, and more eco-friendly way to power your home in the aftermath of a storm or any time the grid goes down. Since they don't use...

The Sun follows an approximately 11-year cycle of magnetic activity. As it passes through the peak of Solar Cycle 25 and enters the early declining phase of the cycle, increased activity ...

Think of a solar storm like a cannon shooting massive amounts of accelerating energy into space. When this energy reaches Earth, it disrupts our planet's magnetic field and creates electrical currents that ...

During Thursday's "severe" geomagnetic storm that sparked the northern lights across most of the U.S., electrical currents surged through rocks under the ground around the country.

Solar storms generate low-frequency geomagnetically induced currents (GICs) (0.0001 to 0.1 Hz), which can affect the operation of the power grid. If these currents reach transformers and ...

The electric power grid, and consequently the power to your home and business, can be disrupted by space weather. One of the great discoveries of the 19th century was the realization that a time ...

Keep extra batteries for your phone in a safe place or purchase a solar-powered or hand crank charger. These chargers are good emergency tools to keep your laptop and other small electronics working in ...

## Can we still use solar power to generate electricity during a magnetic storm

Moreover, while solar PV generates power during the day, it's vital to integrate energy storage solutions, like batteries to meet energy demands at night or during outages. Sizing these ...

Solar storms typically begin when these twisted magnetic fields on the Sun get contorted and stretched so much that they ...
