This paper presents a protection scheme for loopbased microgrids, which is divided into four levels including load-way, loop-way, feeder, and microgrid.

This research introduces a novel application of Prahalad and Ramaswamy's value co-creation theory by analyzing 60 microgrids throughout China as case studies.

This paper presents a review of the microgrid concept, classification and control strategies. Besides, various prospective issues and challenges of microgrid implementation are ...

This study analyzes four typical microgrid energy scenarios in rural areas of China and optimizes their synergistic operation based on county-integrated energy operators.

Coordinating the microgrids (MGs) in the distribution network is a critical task for the distribution system operator (DSO), which could be achieved by setting prices as incentive signals.

To deal with this problem, this research first reviews the real-world and simulation cases of zero-carbon microgrids in recent years and classifies them into two categories, i.e., on-grid mode ...

Based on the microgrid project analysis, ongoing technological innovation, and policy development described in this paper, it is not difficult to see that China's micro-grid policy system is gradually ...

Overall, this paper demonstrates the significant potential for digital technologies to transform the future of microgrids.

Yijia Cao graduated from Xi'an Jiaotong University, Xi'an, China, in 1988 and received M.Sc. degree and Ph.D. degree from Huazhong University of Science and Technology (HUST), Wuhan, China, in 1991 ...

The multi-energy microgrid (MEMG) improves the energy supply economy through a multi-energy coupling

Caojiajia Microgrid

operation. However, due to faults or maintenance, outages may occur in the main ...
