---

In January 2026, two nuclear power projects in east China's Fujian and Jiangsu provinces made important progress. In the same month, China's atomic energy law took effect, providing ...

Researchers at China's Guangdong Power Grid have proposed a new hybrid microgrid system that achieves an operational cost reduction of approximately 18.7% and a drop in carbon ...

Located in the photovoltaic (solar thermal) industrial park of Delingha City, Haixi Prefecture, Qinghai Province, the project combines photovoltaic power generation with solar thermal molten salt energy ...

China's solar energy production is reaching simply staggering levels, dragging energy costs down around the globe.

China is quickly becoming the global leader in nuclear power, with nearly as many reactors under construction as the rest of the world combined. While its dominance of solar panels ...

Recent charts show clear momentum: China's solar output now exceeds U.S. nuclear generation. Also, its nuclear expansion is the largest globally. These developments are not ...

China and the U.S. are fiercely competing for leadership in AI. Electricity supply will be key to that competition. While China has 30 nuclear plants under construction and aggressive plans...

China's record-breaking installation of 93 GW of solar capacity in May 2025, equivalent to three nuclear plants per day, represents a watershed moment in global renewable energy development.

Instead of nuclear, solar is now intended to be the foundation of China's new electricity generation system. Authorities have steadily downgraded plans for nuclear to dominate China's ...

# China Nuclear Home Solar Power Generation

China installed a record 315 GW (AC) of new solar capacity in 2025, lifting cumulative installed PV capacity to 1.2 TW and pushing non-fossil power sources past thermal generation for the ...
