Does Cyprus need a necp?

Cyprus submitted its NECP in January 2020. A high proportion of Cypriots (70 %) expect national governments to tackle climate. Cyprus accounts for 0.26 % of total EU greenhouse gas (GHG) emissions and has reduced its emissions at a slower pace than the EU average since 2005.

How can Cyprus reduce waste-related emissions?

To reduce waste-related emissions, Cyprus has planned a total of 65 measures aimed at reducing waste generation, increasing reuse and recycling, and enhancing separate collection of municipal waste. Several projects are being implemented, with an estimated budget of EUR82 million, co-financed by EU funds.

What is Cyprus's energy strategy?

The strategy analyses the scenarios for developing Cyprus's energy system and end-use consumption models. The aim is to enhance energy efficiency; increase the role of renewable energy sources and ensure the sustainability of energy consumption; and promote alternative fuels and technologies.

When will Cyprus update its necp?

Following the infringement procedure opened by the Commission in November 2024, Cyprus submitted its final updated NECP on 20 December 2024, which should take account of the Commission recommendations published on 18 December 2023.

Volt welcomes the decision of the Environmental Authority for a negative opinion on the construction of a photovoltaic park, with a total capacity of 180MW, in the communities of Kataliontas, ...

The project faces significant environmental challenges, including the planned removal of at least 1,400 mature pine trees aged over 25 years. The site contains multiple watercourses, ...

The Department of Environment has rejected Cyprus's largest planned solar photovoltaic park, citing severe environmental, social and technical impacts that outweigh the project's climate ...

The project covers a total area of 3.37 million square metres and involves installing approximately 265,000 photovoltaic panels. However, its environmental and social impact has ...

In October 2020, the European Commission published an assessment for each NECP. Cyprus submitted its NECP in January 2020. A high proportion of Cypriots (70 %) expect national ...

Its high density of population leads to high environmental pressure and land use change. Long drought periods, forest fires and invasive alien species are also serious threats to its nature and biodiversity.

The 26MW photovoltaic park with 16MW energy storage facilities planned for the Alektora community has drawn criticism for requiring the removal of thousands of olive trees and centuries-old ...

In 2016, a climate change risk assessment was conducted, and Cyprus adopted a national adaptation strategy (NAS) and action plan for climate change in 2017 and 2020, respectively, to identify key ...

Mar 16, Cyprus curtails over 29% of solar energy due to grid constraints. This post explores smart storage, policy fixes, and tech solutions to reclaim wasted clean power.

The Cyprus Department of Environment has granted a permit for the construction of a large-scale 100 MW photovoltaic park. This will be developed by Total Energies in partnership with Universal Green ...
