Double-glass solar modules are made up of two layers of tempered glass that cover both sides of the solar panel. As snow accumulates on a typical solar panel or people stomp on it (during ...

As regulatory frameworks tighten around sustainability standards and grid integration protocols, the market is poised for sustained growth, with technological innovations and cost ...

Dual-glass type modules (also called double glass or glass-glass) are made up of two glass surfaces, on the front and on the rear with a thickness of 2.0 mm each.

Bifacial ratio reaches 80%,30% more module power generation than conventional modules. Two-sided double-glazed modules, symmetrical structural design, low risk of hidden cracks. Higher power ...

Encapsulant material Back Glass POE/EVA 2.0 mm (0.08 inches), Heat Strengthened Glass (White Grid Glass) Connector

Deformation of frameless glass-glass module is more uniform than framed glass-backsheet module. Mounting clips for glass-glass are typically more complicated and expensive. Packing and shipping of ...

Bifacial ratio reaches 80%,30% more module power generation than ...

Assembled with 11BB bifacial PERCIUM cells and gapless ribbon connection technology, these double glass modules have the capability of converting the incident light from the rear side together with the ...

BUILT TO LAST Our PV modules are designed with better technology in mind, made from robust product components, under stringent quality control steps and high-tech manufactu.

Double glass modules use an innovative design with glass on both sides, offering higher photovoltaic conversion efficiency and better environmental characteristics.
