Implementing energy-efficient innovations ensures that ageing buildings and campuses can modernize without resorting to full-scale equipment replacement - saving costs that can be ...

Many energy savings are easy to make, but policy and technology can help with bigger, higher-cost changes. Here are four such energy efficiency examples.

Efficient energy consumption in buildings is one of the most affordable ways to lessen the detrimental effects of climate change and health-related problems. It ...

Energy savings in buildings is defined as the reduction of energy consumption related to heating, air conditioning, lighting, and interior environmental controls, through the use of efficient materials and ...

Energy efficiency improvements doubled in 2022 compared to the five years prior, new data shows. This could be a turning point if policymakers act wisely.

The U.S. Environmental Protection Agency's little blue ENERGY STAR label is used to identify the most energy-efficient buildings in America. These buildings are independently verified to perform better ...

The building sector accounts for up to 37% of energy-related CO2 emissions, but net-zero buildings can become a reality with the latest digital technology.

If we can improve the insulation and ventilation of new and existing buildings simultaneously, there will be positive results for both human health and energy consumption.

Examples of energy-efficient architecture include passive solar design, natural ventilation systems, high-performance building envelopes, and energy-efficient lighting and appliances.

By implementing strategies like climate-responsive design, harnessing renewable energy, and adopting

Energy saving building

sustainable materials, buildings can achieve significant energy savings.

Improving the energy efficiency of buildings is critical to lowering energy costs, strengthening resilience to extreme weather events, improving ...

Decarbonization, electrification, efficiency and digitalization can revamp old buildings, make new builds zero-carbon ready and reduce operating costs.
