What is the least-cost portfolio of long-duration and multi-day energy storage for meeting New York's clean energy goals and fulfilling its dispatchable emissions-free resource needs?

This report demonstrates what we can do with our industry partners to advance innovative long duration energy storage technologies that will shape our future--from batteries to hydrogen, supercapacitors, ...

In this report, our lawyers outline key developments and emerging trends that will shape the energy storage market in 2025 and beyond.

The Department of Energy's (DOE) Energy Storage Strategy and Roadmap (SRM) represents a significantly expanded strategic revision on the original ESGC 2020 Roadmap.

This paper presents a comprehensive review of the most popular energy storage systems including electrical energy storage systems, electrochemical energy storage systems, mechanical ...

Using the Switch capacity expansion model, we model a zero-emissions Western Interconnect with high geographical resolution to understand the value of LDES under 39 scenarios ...

Co-locating energy storage systems with existing power plants that are being retired could reduce storage costs by enabling the reuse of existing grid interconnections and, in some cases, ...

This roadmap reports on concepts that address the current status of deployment and predicted evolution in the context of current and future energy system needs by using a "systems ...

Despite policy headwinds earlier in the year, energy storage additions in China and the US are set to continue growing this decade. The removal of storage mandates in China for ...

In the present work, the concepts of various energy storage techniques and the computation of storage

capacities are discussed. Energy storage materials are essential for the ...
