It was equally hot in ancient Hellas, and the ancient Hellenes found a way to make the heat work for them: solar architecture. Technically the term "solar architecture" refers to the integration of passive ...

To retain the solar aspect of the house, the court had to be positioned toward the south, even if this meant that it would not be at the center of the house. Space for the larger rooms was ...

Modern excavations of many Classical Greek cities show that solar architecture flourished throughout the area. Individual homes were oriented toward the southern horizon, and entire cities were planned ...

It seems safe to say that for most of the winter the sun would have adequately heated the main rooms of a Greek solar-oriented home during the daytime. When solar heat was insufficient, ...

One of Rome's greatest architects, Vitruvius, wrote about using the sun to heat buildings and bathhouses after seeing solar houses in Greece. His advice was apparently followed as bathhouses ...

The series profiles the fascinating people, from ancient Greece and China to late 19th century New York to today, who have made the present day solar revolution possible.

Explore how ancient Greek and Roman architects used passive solar design to harness sunlight for natural heating and cooling.

Discover stunning greek sunroom design ideas. Transform your sunroom with white-washed, blue accents, mediterranean elements. Get inspired by greek style sunroom decor, furniture, and layouts.

Even when the terrain made solar planning difficult, builders found a way. The great playwright Aeschylus suggested that a south-facing orientation was a normal characteristic of Greek ...

Socrates realised that if houses were constructed with the sun in mind, they would be much warmer in winter

Greek Solar Sun Room

and much cooler home in summer. He was so determined to put the idea into ...
