-----  
Can a 6 kilowatt solar system power a house?

As the cost of solar panels continues to decline, 6 kilowatt (kW) solar PV systems are becoming a more popular option for homeowners. In many states, a 6kW PV system will be enough to power an entire house, but it depends on your location and energy needs.

What is a 6 kW solar system?

These 6 kW size grid-connected solar kits include solar panels, DC-to-AC inverter, rack mounting system, hardware, cabling, permit plans and instructions. These are complete PV solar power systems that can work for a home or business, with just about everything you need to get the system up and running quickly.

How much does a 6kW Solar System cost?

6kW solar installations cost about \$12,500 on average after a 30% tax credit. An average 6kW solar panel system can save you enough on utility bills to pay for itself in just under a decade. How big is a 6kW solar system? If you look at the wide range of solar panel system sizes in the U.S., a 6kW array is essentially right in the middle.

How many solar panels do you need for a 6kW system?

A 6kW energy system has 15 solar panels. Depending on the wattage of the solar panels you choose to go with, the actual number of solar panels for your 6kW system will vary. Most solar panels today have a wattage of about 400 watts. For example, if you install 350-watt solar panels, you'll need about 17 panels to make a 6kW system.

How much does a 6kW solar system cost, and how do you know you're getting the best deal on a 6kW system?

Our residential solar packages are the easiest way for you to go solar. This package is all inclusive with the necessary equipment and installation services required for you to start saving on your utility bill ...

Is this solar panel kit right for me? For half the homes in the United States this 6kW ground mounted solar kit is more than enough to completely eliminate their bill. The modules will occupy about 345 ...
