Are 10kW solar systems a good investment in Australia?

10kW solar systems are a great investment for Australian homes with high levels of electricity consumption or businesses with relatively small electricity needs. This article takes a look at 10kW solar system pricing, energy production and returns in Australia. How many panels & how much roof space for a 10kW solar system?

How much does a 10kW Solar System cost?

A complete guide to 10kW solar panel systems. A 10kW solar panel system typically costs between \$9,500 - \$12,500. Prices vary for 10kW systems according to your location and, the quality of components and company you select to perform the install. Solar rebates vary according to the size of your system and the sunshine hours your postcode receives.

How long does a 10kW Solar System last in Australia?

The payback period for a 10kW solar system in Australia is typically 4-5 years. This depends on your self-consumption rate and solar feed-in tariff. A solar system can pay for itself faster if you consume more of the energy on-site (daytime usage), rather than exporting excess to the grid.

Can A 10kw power system be exported to Australia?

In many Australian locations, three-phase power is preferred or required for a 10kW system, particularly for grid export approval. Some distributors may allow installation on single-phase but limit how much can be exported (often to 5kW). Commercial properties generally already have three-phase, making larger systems easier to approve.

As of mid-2025, the average cost of a 10kW solar system in Australia is around \$0.91 per watt, which equates to roughly \$9,130 after factoring in the federal STC rebate. This figure serves as ...
