In this document we demonstrate how the AC impedance of a photovoltaic module or a single solar cell can be measured using the Bode 100 in conjunction with the Picotest J2130A DC-Bias Injector.

Firstly, single-cell laminates, three-cell laminates, and PV panels were selected to measure the peak imaginary part impedance and shunt resistance under various forward bias voltages.

The PV system impedance curve is measured at the open circuit voltage of the PV system in a broad frequency range from about 1 - 100 kHz. The test signal amplitude is kept below a few volts, so the ...
