What is the purpose of the Iceland Electricity Act?

The purpose of this legislative Act is to promote an economic electricity system and thereby strengthen the Icelandic industries as well as regional development in Iceland. To this end:

What is the Icelandic Energy Act?

The Act specifies what can be included as operating expense, and the Icelandic Environment and Energy Agency will establish a cap in correspondence with this while simultaneously making demands for increased rationalization and cost efficiency. The Act also regulates the potential return on capital invested in the operations.

What type of electricity does Iceland use?

Iceland's national electrical grid is owned and run by Landsnet and is composed of 3,000 km of transmission lines and approximately 70 substations. Iceland's electricity is produced almost entirely from renewable energy sources: hydroelectric (70%) and geothermal (30%).

What voltage is used in Iceland?
