Discover the latest emerging energy storage technologies in India. Learn their benefits, applications, and how they are shaping a clean energy future in 2025.

Energy Storage System Products List covers all Smart String ESS products, including LUNA2000, STS-6000K, JUPITER-9000K, Management System and other accessories product series.

Compared to existing energy storage systems, typically offering around 6.25MWh of capacity, this new 10MWh container stands out due to its superior integration, enhanced AC matching...

By leveraging our global expertise in energy storage and grid integration, we aim to provide scalable, cost-effective solutions that contribute to India's clean energy future.

This represents substantial growth from India's current energy storage capacity of approximately 6 GW (mostly pumped hydro), underscoring the need for robust policy and regulatory support to accelerate ...

BESS capacity is expected to surge 375-fold to 42 GW by FY32, while PSP will grow fourfold to 19 GW over the same period. BESS will likely dominate due to its rapid response ...

India has set a target to achieve 50% cumulative installed capacity from non-fossil fuel-based energy resources by 2030 and has pledged to reduce the emission intensity of its GDP by ...

This will be India's first co-located Large Scale BESS (Battery Energy Storage System) solution as well as first Large Scale Solar PV Project in the Union Territory of Ladakh to be set up at ...

This project, entailing deployment of more than 700 BESS containers, will be the largest BESS installation in India and one of the world's largest single-location BESS deployments.

India's ultra-large capacity smart photovoltaic energy storage container

India's battery energy storage capacity is set to rise nearly ten-fold to around 5 GWh in 2026 from 507 MWh in 2025, reflecting a shift from tendering to execution of projects.
