In March 2020, South Sudan's installed generation capacity was reported as approximately 130 MW. Most of the electricity in the country is concentrated in Juba the capital and in the regional centers of Malakal and Wau. At that time the demand for electricity in the county was estimated at over 300 MW and growing. Nearly all electricity sources in the country are fossil-fuel based, with attendant challenges of cost and environmental pollution. There are plans to build new generation stations and to import electr...

United Arab Emirates, July 23, 2020 - I-kWh and Asunim will form a consortium with Elsewedy Electric Co to provide South Sudan The project will consist of a20MW-peak solar ...

South Sudan's move to allow private sector participation in energy generation is a big step in opening up the energy market. Public-private partnerships have been used as a tool to finance ...

As solar adoption grows by 18% annually (World Bank 2023), battery systems are becoming critical for managing intermittent renewable supplies. Let's explore what makes these projects successful and ...

This project incorporates high-quality solar panels, advanced hybrid inverters, and state-of-the-art battery storage. It is designed to meet the energy demands of Royal Palace Hotel while contributing ...

There are plans to build new generation stations and to import electricity from neighboring Ethiopia, Sudan and Uganda, but the civil war has hindered progress in that direction.

The global solar storage container market is experiencing explosive growth, with demand increasing by over 200% in the past two years. Pre-fabricated containerized solutions now account for ...

But why should global energy professionals care about a project in South Sudan? The answer lies in its pioneering shared storage model that's redefining renewable energy economics.
