To better understand how electricity access develops in the context of heterogeneity, we examine five urban neighbourhood types in Mozambique's Greater Maputo region, where heterogeneous ...

The document, launched at the RENMOZ-2025 conference, reveals that, in 2024, the country's electrification rate reached 61 per cent, a significant improvement on previous years, ...

Energy production from renewable sources with a surplus of 30% has been achieved. The proposed digital methodology has identified a maximum gap of 1.5% between the dimensions of the BIM duct...

Bioenergy, mainly wood and charcoal, dominates the energy mix, with nearly 95% of the population relying on traditional fuels for cooking. Yet, Mozambique is endowed with significant untapped energy ...

The study reveals that the scenario featuring a high share of renewable energy in the power mix will be the most affordable and sustainable way to meet electricity demand over the next decade.

Mozambique's growing influence as a regional energy hub was underscored by increased exports and milestones such as boosting energy sales to Botswana and recovering \$22 million in debt from ...

In recent years, efforts have been made to increase the penetration of renewable energy in Maputo. One of the key factors in this trend has been the Mozambican government's commitment ...

The country is strengthening its commitment to the energy transition through an ambitious strategy that combines carbon emission reduction with the promotion of sustainable ...

The study covers two possible scenarios, low renewable and high renewable scenarios, that would enable the country to meet the growing electricity demand and compares them to identify the best ...

Maputo increased renewable energy penetration

This article concerns the relationship between uneven peri-urban growth and heterogeneous energy infrastructures in Metropolitan Maputo, Mozambique. Much research has ...
