-----  
What is a battery test system?

Integrated systems to automatically test, control, & monitor the performance of battery cells, packs and modules for electric and hybrid electric vehicles.

What is a high voltage battery state of health test?

BATTSCAN is still the only professional diagnostic tool to provide a comprehensive High Voltage Battery State of Health Analysis by taking the Hybrid or Electric Vehicle on a voice-guided road test. The test takes minutes and the report is produced in seconds. The test method has been optimized for up to 40% reduction in open roadway required.

What types of battery testing systems are available?

Fuel cell and flow battery test systems also available. Turn-key testing platforms including: regenerative battery cyclers, dynamic automation, high common mode cell voltage monitoring, and Emerald(TM) control software with advanced scripting language. Back-to-Grid Load Bank Specifications

What makes a good battery test system?

In addition to capacity, current and voltage are central to battery development. As a result, the test systems for validating battery packs need to be state-of-the-art. We offer advanced solutions for battery pack and module testing, including containerized and modular test systems.

A reliable hybrid battery tester supplier can help you access high-quality tools that perform a wide range of functions, from capacity testing to charging characteristic evaluations.

Performing the test is simpler than ever. BATTSCAN is still the only professional diagnostic tool to provide a comprehensive High Voltage Battery State of Health Analysis by taking the Hybrid or ...

Hybrid battery testing equipment is integral to the maintenance and performance of hybrid vehicles. It enables technicians to accurately assess the health and efficiency of batteries, ...

Is the equipment capable of controlling and measuring key testing characteristics (e.g. voltage, current) with the required test fidelity? The equipment you choose must be able to perform transients with the ...

# Mobile Base Station Equipment Hybrid Energy Battery Tester

The Only Tool To Test Hybrid Batteries In Vehicle. The HYB provides technicians with the capability to perform battery service maintenance testing on several leading Hybrid vehicles.

The EVd-40 Power Tester is a powerful tool for quality control of aftermarket hybrid & electric vehicle battery production. The equipment integrates NuVant Systems high power discharge technology with ...

Integrated systems to automatically test, control, & monitor the performance of battery cells, packs and modules for electric and hybrid electric vehicles.

AVL provides comprehensive battery testing solutions for electric vehicles, from cell to pack and module, ensuring performance, safety, and durability of your battery systems.

The tester allows us to determine the capacity of modules of high-voltage nickel-metal hydride (Ni-Mh) and lithium-ion (Li-Ion) batteries of hybrid cars and electric vehicles, which is the main criterion of the ...

The MS800 tester is used during the repair of high-voltage batteries in hybrid. The tester can determine the capacity of nickel-metal hydride (Ni-Mh) and lithium-ion (Li-ion) batteries of various types: NMC, ...
