This study takes the battery pack of an electric vehicle as a subject, employing advanced three-dimensional modeling technology to conduct static and dynamic analyses.

Utilizing an industry-leading and diverse technological approach and full-stack self-development capabilities to address concerns such as safety, performance, and supply anxieties, creating a ...

Globally, leading automakers are actively creating new energy-electric vehicles, and one of the key elements determining how competitive these auto markets are is the longevity of power ...

Integration of numerical and geometrical CAD models to evaluate battery pack layouts in terms of thermal performance. This work proposes a multi-domain modelling methodology to support ...

To develop an advanced optimization framework for designing cold-resistant battery packs that enhance energy efficiency, thermal stability, and structural durability under extreme cold conditions, ensuring ...

Explore how innovative EV battery packs are transforming vehicle design, sustainability, cost-structure and range in today's market.

This paper takes a BEV as the target model and optimizes the lightweight design of the battery pack box and surrounding structural parts to achieve the goal of improving vehicle crash safety and ...

Learn how cell-to-pack designs are revolutionizing EV batteries with improved efficiency, lower costs, and enhanced safety features.

This article discusses the changes in battery pack design that impact which cell chemistries can be used in a commercially viable way. An overview is given for future adoption of ...

Electric vehicles carry a whole power plant under their floors - except it's made of batteries, not pistons. To

New energy vehicle battery pack

get a big range, automakers pack thousands of lithium ion battery cells ...
