In the quest for a more sustainable and eco-friendly future, the global shift towards solar power is gaining momentum in unexpected places. Renewable energy production is at the forefront of...

Data and analysis including a list of solar power in every country in the world, countries with the most solar power, and countries that generate the highest percentage of their electricity from solar power.

It examines the current state of solar power and related academic solar energy research in different countries, aiming to provide valuable guidance for researchers, designers, and policymakers ...

Here we use data-driven conditional technology and economic forecasting modelling to establish which zero carbon power sources could become dominant worldwide.

Researchers from Switzerland, Austria, and Germany tracked six photovoltaic systems installed between 1987 and 1993 across the country's dramatically different climates -- temperate valleys, ...

But hold onto your historical monuments! Cities from Rome to Kyoto are proving that heritage conservation and clean energy can coexist surprisingly well. In fact, UNESCO World Heritage sites ...

With the new affordability of solar installations, many cool solar power projects are popping up around the world. Here's a sampling.

The worldwide growth of photovoltaics is extremely dynamic and varies strongly by country. In April 2022, the total global solar power capacity reached 1 TW, increasing to 2 TW in 2024. The top ...

With the push for renewable energy increasing, solar power is being produced in some surprising places. But will it be enough to help combat climate change?

Old-fashioned solar power generation abroad

From the earliest days of solar-powered satellites to modern rooftop arrays and utility-scale solar farms, this is the complete history of solar energy--and a look at its exciting potential in ...
