The results of this study are for a real implemented project and predict the long-term success of small, sustainable energy projects in developing rural areas in Palestine.

In agriculture zone, accessing the water in aquifers often needs a source of energy to pump water, which can present a large problem for many developing countries such as Palestine.

A study implemented in 2021 investigated the status and the impact of solar-powered irrigation systems (SPIS) in Palestine by considering the currently installed systems.

Press Release: Using Solar Energy for Water Pumping Ramallah - April 29, 2025 Ramallah -- The Palestinian Hydrology Group (PHG) has completed an...

In 2024, members of the community in Deir Al-Balah set up a solar-powered water pump which gave 2000 people access to water without having to rely on diesel or gas powered generators.

Environmental benefit: The project demonstrated the utilization of photovoltaic cells to generate electricity up to 10.28 kWh per day to pump ground water for irrigation as an environmentally ...

In this paper, a PV-powered direct-current water pump system design for irrigation is presented, techno-economic feasibility of using solar PV systems for water pumping to replace a ...

In 2017, with funding received through the Humanitarian Fund for the occupied Palestinian territory (oPt HF), the Rural Women's Development Society initiated a project aimed at ...
