Wind power is used on a commercial basis in more than half of all the ...

This dashboard ranks countries/areas to their renewable energy power capacity or electricity generation. The data can be further refined based on region, technology or year of interest.

The world's installed wind power capacity now meets well over 10% of global electricity demand - and much more than nuclear power. More than 30 countries now have a share of wind ...

The "renewables" column indicates the percent of that country's electric generation that was renewable. Links for each location go to the relevant electricity market page, when available.

This ranking tracks the share of electricity generated from renewable sources (hydro, wind, solar, bioenergy and other renewables) as a percentage of a country's total electricity generation.

Global wind power installations reached a new high in 2023, increasing renewable energy's share of total power generation to 30%. China continues to be the driving force behind wind ...

As of 2023, wind power accounts for 6.59% of global electricity generation, with total global wind power capacity exceeding 743 GW. In the United States, wind contributes 9.2% of the ...

About this data Share of electricity generated by wind power Measured as a percentage of total electricity produced in the country or region.

Wind power is used on a commercial basis in more than half of all the countries of the world. [3] Denmark produced 58% of its electricity from wind in 2023, a larger share than any other country.

The United States is the second-largest producer of wind power, and generated 341.40 TWh of wind power in

Ranking of wind power generation proportion

2021, equal to just over 21% of total global production. Together, China and the United ...

Wind electricity capacity, percent, 2023: The average for 2023 based on 189 countries was 5.31 percent. The highest value was in Ireland: 40.32 percent and the lowest value was in Albania: 0 percent. The ...
