Can solar power be integrated into rural communities?

One foreseeable challenge with integrating renewables like solar into rural communities is the interconnection queue, or the list of energy projects requesting and awaiting connection to the power grid. According to the Southwest Power Pool (SPP), building a new transmission line can take anywhere from three to nine years.

Is solar energy a good investment for farmland?

Solar energy is leading the way, with much of the new development occurring on farmland and in rural communities. It has the potential to be a financial opportunity for landowners, yet it can also create barriers for farmer renters and the next generation.

Is solar energy leasing a good idea for farmers?

While solar energy leasing can help farmers who own land diversify their income, it can be a double-edged sword for farm operators, as more than half of cropland is rented. As solar development in rural areas grows, it drives up demand for land.

How many acres are covered by solar panels?

While percentages of projections are readily available, up-to-date national data on the number of acres covered in solar panels is scarce. The ERS approximates solar's footprint as of 2020 at 336,000 acres of rural land based on the total solar production capacity installed in U.S. Census designated rural areas.

Explore Sun For Rent's off-grid and remote power rental solutions. Reliable solar generators for events, mining, rural homes, research, and more.
