Wind energy is gaining the most interest among a variety of renewable energy resources, but the disadvantage is that wind power generation is intermittent, depending on weather conditions.

Our design concept, on the other hand, consists of first storing wind power as potential energy and then producing stable electricity.

With key construction milestones already smashed, Sofia is gearing up to deliver its first jolt of clean energy to the grid later this year. "Sofia is a flagship project for RWE, and it's firing on all ...

RWE, one of the world's leading offshore wind companies, is delighted to announce that the first turbine has been successfully installed at its Sofia Offshore Wind Farm. This important ...

RWE's Sofia wind farm is moving forward with its first turbine ready for installation and generation scheduled for the end of 2025. The Sofia offshore wind farm, developed by RWE on the Dogger ...

Voltalia has launched the first phase of the Artemisya project in Uzbekistan, a hybrid complex combining wind power and energy storage for a total of 200 megawatts, with commissioning scheduled for 2027.

With the establishment of a large number of clean energy power stations nationwide, there is an urgent need to establish long-duration energy storage stations to absorb the excess electricity ...

This is a major landmark moment: Sofia, one of the largest offshore wind farms in the world, will be the first in UK waters to feature this industry-leading innovation."

Today takes us a step closer to achieving our mission for clean power by 2030, with over a million homes expected to be powered by the cutting-edge turbines of Sofia wind farm.

Sofia s first integrated wind power and energy storage

The Sofia offshore wind farm, developed by RWE on the Dogger Bank, UK, has made significant progress in its construction. The company is preparing to install the first wind turbines in ...
