Australian scientists have been leading the way in solar research and development, with groundbreaking innovations such as the high efficiency PERC cell, and are continuing to make improvements ...

Solar Victoria operates one of the largest sustainability and renewable energy programs in the country, accelerating uptake of solar and electrification in Victorian homes.

Renewable energy is a focus of IESVic. IESVic researchers are working on both sides of the sustainable energy problem: designing technologies to harness renewable sources and studying the integration ...

This draft outlines the state's transition away from coal-fired power towards variable renewable energy generation and energy storage over the next ...

The Solar Energy Facilities Design and Development Guideline provides a comprehensive framework for the planning, design, and development of large-scale solar energy facilities in Victoria.

Our solar research has been part of Australia's energy story for 70 years, and we're still innovating. Our research aims to make solar a renewable, adaptable and affordable power source for ...

They are a useful resource for proponents, responsible authorities and other stakeholders interested in understanding the development and approval process for solar energy facilities in Victoria.

This draft outlines the state's transition away from coal-fired power towards variable renewable energy generation and energy storage over the next 15 years.

Wind and solar energy facilities will lead the transition to clean renewable energy in Victoria.

To address this, we propose StochRad-UAGAN, a novel gray-box GAN framework. Instead of generating

Solar energy research and development victoria

power data, it synthesizes physically-consistent solar radiation scenarios by modeling the ...

VRET2 is expected to support 920 direct jobs and attract AU\$1.48 billion (US\$910 million) investment in new Victorian renewable energy projects, with strong local content requirements....
