What is a portable solar generator?

The solar panels used in conjunction with a portable solar generator are mobile and easy to manipulate. Unlike the panels found on residential or commercial properties, they are smaller in size and have a lower wattage capacity, which means less solar input than their larger counterparts.

Can propeller shaft generators be used at low rpm?

Several of our cruising friends have had good success using propeller shaft generators at low rpm. However, using the engine at low rpm and with a light load can be hard on the engine and annoying, as it disrupts the perfect broad reach on a warm, starry night.

How do you distribute power in a solar generator?

To distribute power in my homemade solar generator, I used a 6-circuit fuse panel for the positives, and for the grounds, I used a busbar. Fix both of these to the case floor using a hot glue gun. Once the glue dries, I recommend you add another layer of superglue all around the edges.
