Solar panels make for very good real estate -- if you're a flower. A new paper reports that the partial shade these panels generate can increase the abundance of flowers and create a delay...

A new study revealed that the shade created by solar panels boosted the number of flowers growing under the panels and delayed the time when they bloomed, both of which could be beneficial to the ...

CORVALLIS, Ore. - A new study by Oregon State University researchers found that shade provided by solar panels increased the abundance of flowers under the panels and delayed ...

A new study by Oregon State University researchers found that shade provided by solar panels increased the abundance of flowers under the panels and delayed the timing of their bloom,...

A new study by Oregon State University researchers found that shade provided by solar panels increased the abundance of flowers under the panels and delayed the timing of their bloom, ...

Here we investigated the effects of solar arrays on plant composition, bloom timing and foraging behavior of pollinators from June to September (after peak bloom) in full shade plots and partial ...

Sprawling plains of solar panels can help nature more than just by providing clean energy: As populations of crucial pollinators decline, developers have been seeding the grounds of ...

CORVALLIS, Ore. (KTVZ) - A new study by Oregon State University researchers found that shade provided by solar panels increased the abundance of flowers under the panels and ...

We found that floral abundance increased and bloom timing was delayed in the partial shade plots, which has the potential to benefit late-season foragers in water-limited ecosystems.
