-----

LHASA -- China has achieved another breakthrough in wind power development at ultra-high altitudes, with the world's highest wind power project in Xizang autonomous region generating ...

As of March 2025, China has emerged as the world's offshore wind powerhouse -- growing from under 5 GW in 2018 to 42.7 GW in 2025 (50% of global capacity). Offshore wind could play a role in ...

China is getting ready for the flight test of an airborne power generation system, which looks like an airship, and generates power like a turbine. The research team behind the project says...

China has successfully completed the first flight of its home-designed floating wind turbine, the S1500, in Hami, Xinjiang. The system passed strict tests, including full desert assembly ...

Wind power could soon come from the sky as China has successfully tested a megawatt-class airborne turbine that generates electricity while hovering 2000 metres up.

China is racing to develop a new generation of wind farms that can not only survive tropical cyclones, but also harness their power.

Chinese engineers have created a prototype floating wind turbine that they say has broken power generation records -- potentially ushering in a new generation of renewable power ...

While a terrestrial turbine picks up currents at about 200 meters, this airship picks them up at 500 meters. The helium-fueled S500 airship, equipped with an airborne turbine, reached an ...

In recent years, China has made many new breakthroughs in the development of wind power technology in the fields of high-power wind turbines, wind turbines for ultra-low wind speed, ...

China is preparing to test a groundbreaking airborne power generation system that looks like an airship but

# Xiaoshe Wind Power Generation

functions like a wind turbine. Developed by Beijing SAWES Energy Technology ...
